worldwide the most important arboviruses are chikungunya dengue japanese encephalitis mayaro west nile zika and ross river viruses a significant public health threat is posed by these viruses around the world which threaten more than 3 6 billion

people in recent decades scientists have revealed many issues with arboviruses and established approaches allowing us to fight the diseases more effectively however old and new problems continue to haunt us motivating us to develop new approaches to fight these diseases a growing number of arboviruses have been detected in different regions of the world emphasizing the need to better understand how these viruses are transmitted and infect there is an urgent need to understand all aspects of arbovirus transmission and infection these include molecular mechanisms macro analysis epidemiology experimental models vaccines vector competence and antiviral drugs this research topic aims to establish new concepts and approaches to control arboviruses by uncovering new insights and the latest research innovations in arbovirus transmission and infection in this second volume of the research topic we welcome submissions of original research articles reviews and mini reviews on the following subtopics which include but are not limited to 1 experiencing revealing arbovirus adaptation and evolution 2 genomic and arbovirus isolates from vectors hosts examining the overall evolution of arboviruses in nature 3 entry and infection factors and pathways following arbovirus transmission and infection in nature 4 epidemiological studies of arboviruses in v including ecological data 5 computational biology approaches to uncover infection and transmission 6 development of vaccines and antiviral modalities arboviruses

the energy transition initiated in recent years has enabled the growing integration of renewable production into the energy mix microgrids make it possible to maximize the efficiency of energy transmission from source to consumer by bringing the latter together geographically and by reducing losses linked to transport however the lack of inertia and the micro grid support system makes it weak and energy storage is necessary to ensure its proper functioning current storage technologies do not make it possible to provide both a large capacity of energy and power at the same time hybrid storage is a solution that combines the advantages of several technologies and reduces their disadvantages modeling and control of static converters for hybrid storage systems covers the modeling control theorems and optimization techniques that solve many scientific problems for researchers in the field of power converter control for renewable energy hybrid storage and places particular emphasis on the modeling and control of static converters for hybrid storage systems covering topics ranging from energy storage to power generation this book is ideal for automation engineers
