the four volumes of the book series engineering tools for environmental risk management deal with environmental management assessment monitoring tools environmental toxicology and risk reduction technologies this last volume focuses on engineering solutions usually needed for industrial contaminated sites where nature's self remediation is inefficient or too slow the success of remediation depends on the selection of an increasing number of conventional and innovative methods this volume classifies the remedial technologies and describes the reactor approach to understand and manage in situ technologies similarly to reactor based technologies technology types include physicochemical biological or ecological solutions where near natural sustainable remediation has priority a special chapter is devoted to natural attenuation where natural changes can help achieve clean up objectives natural attenuation and biological and ecological remediation establish a serial range of technologies from monitoring only to fully controlled interventions using

just the natural ecosystem or sophisticated artificial living systems passive artificial ecosystems and biodegradation based remediation in addition to natural attenuation demonstrate the use of these green technologies and how engineering intervention should be kept at a minimum to limit damage to the environment and create a harmonious ecosystem remediation of sites contaminated with organic substances is analyzed in detail including biological and physicochemical methods comprehensive management of pollution by inorganic contaminants from the mining industry leaching and bioleaching and acid mine drainage is studied in general and specifically in the case of an abandoned mine in hungary where the innovative technology of combined chemical and phytostabilization has been applied the series of technologies is completed by electrochemical remediation and nanotechnologies monitoring verification and sustainability analysis of remediation provide a comprehensive overview of the management aspect of environmental risk reduction by remediation this book series focuses on the state of knowledge about the environment and its conscious and structured application in environmental engineering management and decision making

environmental history has traditionally told the story of man and nature scholars have too frequently overlooked the ways in which their predominantly male subjects have themselves been shaped by gender seeing nature through gender here reintroduces gender as a meaningful category of analysis for environmental history showing how women s actions desires and choices have shaped the world and seeing men as gendered actors as well in thirteen essays that show how gendered ideas have shaped the ways in which people have represented experienced and consumed their world virginia scharff and her coauthors explore interactions between gender and

environment in history ranging from colonial borderlands to transnational boundaries from mountaintop to marketplace they focus on historical representations of humans and nature on questions about consumption on environmental politics and on the complex reciprocal relations among human bodies and changing landscapes they also challenge the ecofeminist position by challenging the notion that men and women are essentially different creatures with biologically different destinies each article shows how a person or group of people in history have understood nature in gendered terms and acted accordingly often with dire consequences for other people and organisms here are considerations of the ways we study sexuality among birds of william byrd s masking sexual encounters in his account of an eighteenth century expedition of how the ecology of fire in a changing built environment has reshaped firefighters own gendered identities some are playful as in a piece on the evolution of snow bunnies to shred betties others are dead serious as in a chilling portrait of how endocrine disrupters are reinventing humans animals and water systems from the cellular level out aiding and adding significantly to the enterprise of environmental history seeing nature through gender bridges gender history and environmental history in unexpected ways to show us how the natural world can remake the gendered patterns we ve engraved on ourselves and on the planet
